

As a subscriber to XM radio, I pay for the privilege to receive programming that satisfies my needs. One of the benefits of this paid subscription is 24 hour instant weather and traffic, no matter where I am. This helps me tremendously at the times when I need it. In addition, the total programming that XM offers allows me to stay on top of news, local and national events, business, sports and investing, not mention the wide range of music that is offered. All of this comes at a price that I am willing to pay, like millions of others, for the convenience and access to this information. I urge you to reject NAB's petition 04-160 to limit locally oriented content. We need to allow subscribers to continue to benefit from the service and reject any attempts to limit technology and keep it in the dark ages.
